

CONSTRUCTION

CONCRETE VS. PLASTIC

Our Concrete Septic tanks are heavy, they are very, very heavy! They are made right and are built to last the test of time. But being heavy means they are more difficult to move. Plastic tanks are light and easy to move, but does this one component make them the better choice? Our answer is no and here is why.

- Ease of Installation- A heavy concrete tank's sides will not cave in when backfilled. Use the dirt on site too backfill with, no sand is necessary. Less storage requirements for you, with McAtee Construction we deliver the tank when you are ready. You dig, we set.
- Durability- Our tanks can be pumped empty without fear of collapsing. Concrete is resistant to environmental changes. Less likely to crack or float.
- Non-toxic- Concrete is a material that does not hurt our ground water. It is environmentally safe and made from natural materials. It is permitted for installation everywhere. Plastic septic tanks are regulated.
- Cost efficient- Our prices are comparable and even less than many of the plastic tank competitors.

THE BENEFITS OF A MCATEE CONSTRUCTION SEPTIC TANK
